

Sources — Case Study #1: The Giza Transmission Hypothesis

Note on framing. Case Study #1 is an explicitly **speculative thought experiment**, not an empirical claim. Its purpose is to pose the deep-time transmission question that the rest of the series then tests against real evidence. Accordingly, the mainstream Egyptological position is treated as ESTABLISHED, and the “transmission hypothesis” itself is treated as SPECULATIVE throughout. No fringe claim is asserted as fact, and no invented statistics are used.

Mainstream Egyptological anchors (ESTABLISHED)

The established consensus the thought experiment rests on — that the Giza pyramids are Old Kingdom royal funerary monuments of the Fourth Dynasty (c. 2600–2500 BCE), built by an organized state workforce — is drawn from the standard reference literature:

- Lehner, M. (1997). *The Complete Pyramids*. London: Thames & Hudson. — Standard synthesis of pyramid construction, chronology, and function.
- Verner, M. (2001). *The Pyramids: The Mystery, Culture, and Science of Egypt’s Great Monuments*. New York: Grove Press. — Comprehensive scholarly overview of the pyramid complexes.
- Petrie, W. M. F. (1883). *The Pyramids and Temples of Gizeh*. London: Field & Tuer. — The foundational precision survey of the Giza plateau; source of the baseline metrology.
- Romer, J. (2007). *The Great Pyramid: Ancient Egypt Revisited*. Cambridge: Cambridge University Press. — Detailed reconstruction of construction method and organization.
- Ancient Egypt Research Associates (AERA) / Lehner, M. — ongoing excavation and publication of the Giza workers’ settlement (“Heit el-Ghurab”), establishing the labor organization behind the monuments.

Metrology and reproducible-reference discussion (context)

- The case study’s treatment of physical reference units and reproducible measurement is a design argument (how a civilization might anchor units to reproducible physical constants), not a claim that the builders did so. It is presented as PLAUSIBLE INFERENCE / SPECULATIVE and should not be read as an assertion about Old Kingdom practice.

Publication record

- Hone, D. (2026). *The Giza Transmission Hypothesis: A Coherent Inheritance Framework Thought Experiment in Deep-Time Information Preservation*. Remnant Fieldworks Inc. DOI: [10.5281/zenodo.21618896](https://doi.org/10.5281/zenodo.21618896) (<https://doi.org/10.5281/zenodo.21618896>).

Notes on evidence handling

- ESTABLISHED: the dating, function (royal tombs), and construction context of the Giza pyramids, per the mainstream references above.

- SPECULATIVE: the hypothesis that the monument was intended to, or does, transmit meaning to the distant future. This is the thought-experiment core and is labeled speculative wherever it appears.
- The case study makes no “lost civilization,” “ancient advanced technology,” or pseudo-archaeological claims, and none of the sources above support such claims.
